

Jack Fordyce

Senior Site Reliability Engineer

jackmitchellfordyce.com

<https://github.com/jackmford>

Site reliability engineer focused on simplifying how organizations operate production systems. Experience building reliability platforms and tooling, establishing enterprise SLO and observability programs, automating infrastructure operations, and developing greenfield agentic AI systems for incident management.

WORK EXPERIENCE

Senior Site Reliability Engineer, Ford Motor Company

March 2025-Present

- Reducing manufacturing plant outages by building agentic AI systems designed to accelerate incident investigation and resolution.
- Streamlining incident management by automating coordination work during live incidents, reducing time spent on manual operational tasks.
- Establishing enterprise patterns for Model Context Protocol development and usage, laying the groundwork for AI-enabled operational tooling.

Software Engineer (SRE), Principal Financial Group

July 2022-March 2025

- Helped grow Principal's initial SLO program from zero to over 500 SLOs across the organization.
- Established the reliability, observability, and monitoring enterprise standards at Principal.
- Simplified how engineering teams approached application reliability through SLO tooling, educational resources, and direct engagement with application teams.

Software Engineer, Principal Financial Group

May 2020-July 2022

- Defined greenfield SLOs for the Apigee API gateway, sustaining 99.95% reliability in production.
- Reduced on-call burden for team engineers by defining SLOs, refining alerting strategies, and simplifying incident response.
- Modernized monitoring capabilities for shared enterprise API gateways, improving production visibility into those systems during incidents.

Software Engineer Intern, Principal Financial Group

May 2019-May 2020

- First place in Principal's 2019 Summer Intern Code Jam.
- Utilized Python and Ansible automation to modernize API platform management.

TECHNICAL SKILLS

Programming Languages: Python, Go, TypeScript

Tools & Platforms: AWS, GCP, DigitalOcean, GitHub Actions, Docker, ELK Stack, Dynatrace, Prometheus, Grafana, CloudWatch, Alertmanager, Nabl9, MCP, Terraform, Ansible

EDUCATION

Bachelor of Science in Computer Science, Buena Vista University, Storm Lake, IA
Magna Cum Laude, Full-Tuition Academic Scholarship Recipient
